Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

I am	Describe customer with 3-4 key characteristics - *who are they?*	Describe the customer and their attributes here
I'm trying to	*List their outcome or "job" the care about - what are they trying to achieve?*	List the thing they are trying to achieve here
but	Describe what problems or barriers stand in the way – *what bothers them most?*	Describe the problems or barriers that get in the way here
because	Enter the "root cause" of why the problem or barrier exists – *what needs to be solved?*	Describe the reason the problems or barriers exist
which makes me feel	Describe the emotions from the customer's point of view – *how does it impact them emotionally?*	Describe the emotions the result from experiencing the problems or barriers

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	a user who needs a new or existing network connection	request the service with the correct details and know what happens to it	my request goes by phone or email, I have to repeat my details, and I don't know whether it	there is no single structured intake form linked to an automated record, approval and notification process	frustrated and uncertain

			has been approved		
PS-2	a Network Team member / approver who processes network requests	review, approve and fulfil requests quickly and accurately	requests arrive incomplete and I must re-enter them and chase approvals manually	requests are not captured in a structured record that is connected to an approval step and a fulfilment task	overloaded and worried about errors

PS-1 (Requester): I am a user who needs a new or existing network connection. I'm trying to request the service with the correct details and know what happens to it, but my request goes by phone or email, I have to repeat my details, and I don't know whether it has been approved, because there is no single structured intake form linked to an automated record, approval and notification process, which makes me feel frustrated and uncertain.

PS-2 (Network Team / Approver): I am a Network Team member who processes network requests. I'm trying to review, approve and fulfil requests quickly and accurately, but requests arrive incomplete and I must re-enter them and chase approvals manually, because requests are not captured in a structured record connected to an approval step and a fulfilment task, which makes me feel overloaded and worried about errors.

How this project addresses them: the Network Request catalog item captures structured details (with the existing-ID field shown only when needed), and the Network Request Automation flow creates a Database Tables record, generates an acknowledgement email record, requests approval and updates the approval status. Note: email delivery to the requester still requires an SMTP account to be configured.
