Project Design Phase-II

Customer Journey Map

Date	[DD Month YYYY]
Team ID	[Team ID]
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	

Customer Journey Map: The template folder provides a Customer Journey Map example (Fairplane — Guided city tours) with the stages Entice, Enter, Engage, Exit and Extend and the rows Steps, Interactions, Goals & motivations, Positive moments, Negative moments and Areas of opportunity. The same structure is applied below.

Scenario: Requesting, approving and fulfilling a network connection through ServiceNow. Based on the project team's analysis of the implemented process; not based on formal customer interviews.

	Entice **How does the user become aware of the process?**	**Enter** **What happens as they begin?**	**Engage** **Core moments — what happens?**	**Exit** **What happens as it finishes?**	**Extend** **What happens afterwards?**
Steps	Needs a new connection or a change to an existing one; learns that network requests are raised in the Service Catalog.	Opens Network Request; Requester Information is pre-filled; selects Type of Connection (New / Existing).	Submits; a request number (e.g. REQ0010004) is issued; the flow creates a Database Tables record, an email record and an approval.	Approver approves; record updated to Approved; Network Team closes the catalog task (Closed Complete).	Requester and team look back at past requests and their status.
Interactions	Service Catalog, Network category, colleagues.	Catalog item form, variable set, UI Policy.	Request record, Flow Designer, outbound email record, approval record.	Approval record, Database Tables record, catalog task.	Database Tables list and related approvals.
Goals & motivations	"Help me find where to request network service."	"Help me give the right details quickly."	"Help me know my request is in progress."	"Help me get my connection done."	"Help me track what I asked for."
Positive moments	One known place to ask.	Email and User Name are pre-filled; the existing-ID field appears only for Existing.	Record and approval are created automatically, with no manual hand-off.	Decision and status are captured on the record.	Each request is stored with its approval status.

	Entice **How does the user become aware of the process?**	**Enter** **What happens as they begin?**	**Engage** **Core moments — what happens?**	**Exit** **What happens as it finishes?**	**Extend** **What happens afterwards?**
Negative moments	Unsure which item to use or which details are needed.	Phone Number was not pre-filled in testing (System Administrator account).	Acknowledgement email is not delivered while SMTP is not configured.	Rejected path not yet tested; no outcome email to the requester.	No dashboard or SLA view yet.
Areas of opportunity	Clear category and short description ('Network Services Request').	Verify phone population; add field validation.	Configure SMTP; add status notifications.	Add approval/rejection emails; test the Rejected branch.	Reports, dashboard, SLA and satisfaction survey.
