Project Overview:

Project Name: Automated Network Request Management in ServiceNow

Project Description: A ServiceNow solution in which users submit network service requests through the Network Request catalog item, with dynamic fields and pre-filled requester details. The Network Request Automation flow creates a Database Tables record, generates an email notification record, requests approval and updates the approval status; the Network Team closes the catalog task.

Project Version: 1.2 (development instance build — screenshot evidence and project links added)

Testing Period: [Start Date] to [End Date]

Testing Scope:

Features: Network Request catalog item; variables and Requester Information variable set; UI Policy 'Show existing ID field'; Flow 'Network Request Automation' (trigger, Get Catalog Variables, Create Record, Send Email, Ask For Approval, approval condition, Approved/Rejected updates); Approval Request relationship; outbound email; catalog task closure.

User stories USN-1 to USN-12; requirements FR-1 to FR-9 (see Solution Requirements and User Stories documents).

Testing Environment:

URL/Location: https://dev427931.service-now.com — ServiceNow Personal Developer Instance (development environment, not production). Project repository: https://github.com/pavan-kalyan-pk-2646/servicenow-network-request-automation.git. Project demo: https://drive.google.com/drive/folders/1PAaBuybnLuN8JptoJ27fXBuDrTUFdcjM?usp=sharing

Credentials (if required): Not included in this document for security. Tests used the System Administrator account; credentials are held by the project owner.

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-01	Catalog item availability	1. Open the Service Portal / Service Catalog 2. Locate 'Network Request'	Item available with description 'Network Services Request'; form opens.	Network Request shown in Popular Items with 'Network Services Request'; form opens at Network > Network Request.	Pass
TC-02	Request submission	1. Fill all variables 2. Order Now	Request record generated with a request number.	My Requests lists REQ0010004, REQ0010003 and REQ0010002 for Network Request.	Pass

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-03	Existing-ID field shown for Existing	1. Select Type of Connection = Existing	'Enter your existing id' becomes visible.	Field visible when Existing is selected.	Pass
TC-04	Existing-ID field hidden for New	1. Select Type of Connection = New	'Enter your existing id' is not shown.	Field not shown when New is selected.	Pass
TC-05	Variable set: Email and User Name auto-population	1. Select the user in Opened on behalf of 2. Observe Email and User Name	Email and User Name are populated from the referenced user.	Reported as populated by the tester; no screenshot captured (Screenshots 2 and 3 show the fields before a user is selected).	Requires Verification
TC-06	Variable set: Phone Number auto-population	1. Select the user 2. Observe Phone Number	Phone Number is populated when the user record holds a phone value.	Phone Number did not populate for the System Administrator account.	Requires Verification
TC-07	Flow trigger on catalog item request	1. Request the item / run a flow test 2. Open the execution	Flow starts on the Service Catalog trigger.	Trigger 'Service Catalog'; execution shows 'Catalog Item Requested' (Test Run — Completed).	Pass
TC-08	Get Catalog Variables	1. Open the execution 2. Expand step 1	Step completes and outputs the submitted variable values.	Completed in 98 ms; output pills defined for all variables. Output values not shown in the screenshots.	Requires Verification
TC-09	Create Record stores submitted values	1. Open the records created by the flow 2. Compare with the submitted form values	Each field holds the value entered on the form.	Records created by the flow hold the literal variable names (address, mobile_number, requested_for, total_amount, mode_of_payment, type_of_connection) and Database Number = 'Trigger → Service Catalog → Requested It...'.	Fail
TC-10	Email record generation and content	1. Open System Logs → Emails 2. Open the generated email	Email record with subject 'Network Request Received - Pending Approval', configured body and recipient.	Email record generated (Target DAT0001016, Flow Designer source); subject, body and recipient populated; Type send-ready.	Pass
TC-11	External email delivery	1. Check the recipient inbox 2. Check the email log	Email delivered to the recipient inbox.	Not verified. Record remains send-ready; Email Log has no entries; owner reports that no active SMTP account is configured.	Requires Verification
TC-12	Ask For Approval	1. Approve as System Administrator 2. Open the execution	Approval requested; flow continues after the decision.	Step 4 Completed; flow resumed at 21:58:24 after the decision.	Pass
TC-13	Approval condition evaluation	1. Inspect 'If Request is Approved'	Condition evaluates True when approved.	Evaluated — True.	Pass
TC-14	Approved branch record update	1. Inspect step 6 2. Open the Database Tables list	Approval Status = Approved.	Step 6 Update Record Completed. Record DAT0001015 was observed with Approval Status = Approved (owner observation); a flow-created record with Approval Status = Approved is visible in Screenshot 8.	Pass
TC-15	Rejected branch record update	1. Reject the approval 2. Open the record	Else branch runs and Approval Status shows Rejected.	Not executed (Else and step 8 Not Run in the test run).	Not Tested

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-16	Approval Request related list	1. Open a Database Tables record 2. Open the related approvals list	Only approvals with matching source_table and document_id are listed.	Not executed.	Not Tested
TC-17	Catalog task closure	1. Open SCTASK0010008 2. Set State = Closed Complete	Task saved with State Closed Complete.	SCTASK0010008 is Closed Complete (changed from Pending on 2026-10-19 08:14:33); linked to RITM0010004.	Pass
TC-18	Mandatory-field validation	1. Leave mandatory fields blank 2. Order Now	Submission blocked with messages.	Not executed. Six variables are marked mandatory (*) on the form.	Not Tested
TC-19	Mobile number format validation	1. Enter letters or a wrong length 2. Order Now	Invalid number rejected.	Not executed.	Not Tested
TC-20	Existing ID required for Existing	1. Select Existing 2. Leave the existing id blank 3. Order Now	Submission blocked.	Not executed. The UI Policy action sets Mandatory = Leave alone, so the field is not made mandatory.	Not Tested
TC-21	Access control on Database Tables	1. Log in as a non-admin user 2. Try to read or edit a record	Unauthorised access prevented.	Not executed. No ACLs are listed for u_database_table.	Not Tested
PT-01	Catalog form load time	1. Open the form 5 times 2. Record load time	Form loads within an agreed target.	Not measured.	Not Tested
PT-02	Flow step durations	1. Read state and duration of each step in the execution	Duration recorded for each automated step.	One test run: Get Catalog Variables 98 ms; Create Record 152 ms; Send Email 925 ms; Ask For Approval 2155 ms; If 288 ms; Update Record 288 ms; flow statistics 3633 ms. Single observation, not a load test.	Pass
PT-03	Multiple submissions	1. Submit several requests in quick succession	Each request processed without errors.	Not executed.	Not Tested

Bug Tracking:

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-01	Phone Number in the Requester Information variable set did not populate for the System Administrator account.	1. Open Network Request 2. Opened on behalf of = System Administrator 3. Observe Phone Number	Medium	Open	Email and User Name populate. Check whether the user record has a phone value and how the variable is populated.
BG-02	Notification email is generated but not delivered; the record stays send-ready and the Email Log is empty.	1. Submit a request 2. Open System Logs → Emails 3. Check Type and Email Log	High	Open	Owner reports no active SMTP account. Configure and validate an SMTP account, then retest TC-11.
BG-03	Create Record stores literal variable names (e.g. 'address', 'mobile_number') and the trigger pill path in Database Number instead of the submitted values.	1. Run the flow for a request 2. Open the Database Tables list 3. Compare field values with the form	High	Open	Recommended fix (not yet applied or retested): re-map each Create Record field with the matching data pill from step 1 (Get Catalog Variables), decide the source for Database Number, publish the flow and retest TC-09. See the Create Record mapping review in the Project Report (Section 4.3.7.1).
BG-04	No access controls (ACLs) are listed for the custom table u_database_table.	1. Open System Definition → Tables → Database Tables 2. Open the Access Controls tab	Medium	Open	Define read/write/create/delete ACLs for appropriate roles and test with a non-admin user (TC-21).

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-05	Approval Status is a free-text String; observed values are inconsistent (Pending, Approved, requested).	1. Open the Database Tables list 2. Compare Approval Status values	Low	Open	Convert to a Choice field (Requested / Approved / Rejected) or align the values written by Ask For Approval and Update Record.
BG-06	The list filter 'Database Number >= DAT0001015' does not select records by DAT number, because Database Number is a custom String field and DAT numbers are stored in the Number field.	1. Open the Database Tables list 2. Apply Database Number >= DAT0001015	Low	Open	Filter on the Number field instead. This filter is not evidence that records are missing or that approval failed.

Sign-off:

Tester Name: [Name of Tester]

Date: [Date of Test Completion]

Signature: [Tester's Signature]

Notes:

- Ensure that all test cases cover both positive and negative scenarios.
- Encourage testers to provide detailed feedback, including any suggestions for improvement.
- Bug tracking should include details such as severity, status, and steps to reproduce.
- Obtain sign-off from both the project manager and product owner before proceeding with deployment.
